

Solar Charge Controller Model AS-3602

Introduction : Geric Holdings Led lighting

Description: Automatic identification intelligent controller

Battery type: Automatic identification of 12V and 24V

Maximum operating current: 10A

Video display: 2 digit

Charging mode: Intelligent PWM charging

Support optical control, Support time control

Over charge protection, over discharge protection, short circuit protection, charging overheat protection.

Note:

1. The load output can only be connected to a DC device, and the maximum power cannot exceed 120W
2. When using a 24V battery, only use 12V appliances.

Order of connection:

1. First pick up the battery.
2. Connect DC bulb (no need to use).
3. Connect solar panels.
